Overview: Mammoth Caves National Park is located in the Green River Valley in south central Kentucky. Established in 1941, Mammoth Caves National Park is known as the world’s largest cave system with more than 400 miles explored. The park protects and maintains this cave system and the rich history from Native Americans in prehistory to pioneers and from enslaved guides to explorers. The park now hosts a series of tours that take visitors deep into the cave system, with some traveling at night by lantern and learning about the history of the caves.

Day-to-day: Students will be responsible for general park maintenance, invasive species removal, and clearing out rubble from the historical section of the caves. Students will also be paired with a ranger and assist them for the work week.

The Nitty-Gritty Details: Participants will camp for one night and then stay in a cabin at the Mammoth Caves National Park for the week. The site will not provide meals so students will need to cook on their own.

SPECIFICATIONS
Location: Mammoth Cave, KY
Price: $250
Trip Price includes:
